FIG. 1 is a block diagram of a system 10 for processing an order. The system 10 includes a client 100 and a server 102. The client 100 includes a screen display 102, an input quantity of order 104, and a new quantity of order 106. The server 102 includes a predetermined number 124 and a process order 126. The input quantity of order 104 is input to the screen display 102. The screen display 102 outputs the input quantity of order 104 to the server 102. The server 102 compares the input quantity of order 104 with the predetermined number 124. If the input quantity of order 104 is equal to the predetermined number 124, the server 102 returns a notice 122 to the screen display 102. The screen display 102 then outputs the new quantity of order 106 to the server 102. The server 102 then processes the order 126.
